Atmel SAMV71 Xplained Ultra: Blinky Lab

MDK Version 5 Tutorial Spring 2015, V 1.0

Abstract

This tutorial shows how to create the Blinky project using the Atmel SAMV71 Xplained Ultra development board.

Create a New Project for the Xplained Ultra Board

- I. In the main μ Vision menu, select **Project** \rightarrow **New** μ **Vision Project...** The 'Create New Project' window opens up.
- 2. Create a new directory called **Blinky** and enter **Blinky** for the File name. Press **Save**.
- 3. In the 'Select Device for Target' window select **ATSAMV71Q21** and press **OK**.
- 4. In the 'Manage Run-Time Environment' window select the following Software Components:
 - a. CMSIS:RTOS (API):Keil RTX
 - b. Board Support:LED (API):LED
 - c. When done, press **Resolve** and afterwards **OK**.
- 5. The Project window should look like this —

Add user code templates main.c and Thread.c

- 6. Right-Click Source Group I and select Add New Item to Group 'Source Group I'...
- 7. In the upcoming window, select User Code Template and then expand CMSIS. Select CMSIS-RTOS 'main' function and click Add:

Project 📮 🔯
🖃 😤 Project: Blinky

E Project

		Add template file(s) to the	project.	
		Component	Name	
C++ File (.c	cpp)	🖃 🚸 CMSIS		
Asm File (s)		RTOS:Keil RTX	CMSIS-RTOS 'main' function	
		RTOS:Keil RTX	CMSIS-RTOS Mail Queue	
h Header File (h) Text File (txt)		RTOS:Keil RTX	CMSIS-RTOS Memory Pool	
		RTOS:Keil RTX	CMSIS-RTOS Message Queue	
		RTOS:Keil RTX	CMSIS-RTOS Mutex	
Image File (.*)		RTOS:Keil RTX	CMSIS-RTOS Semaphore	
		RTOS:Keil RTX	CMSIS-RTOS Thread	
User Code Template		RTOS:Keil RTX	CMSIS-RTOS Timer	
		RTOS:Keil RTX	CMSIS-RTOS User SVC	-
rpe: ame: ocation:	User Code Temp osObjects.h ma C:\01_workspace	olate in.c ce\MDKv5\Atmel\Blinky		

8. Repeat the process and choose **CMSIS-RTOS Thread**. You now should see a *main.c* and a *Thread.c* file below the Source Group 1.

Configure CMSIS-RTOS RTX

- 9. Open RTX_Conf_CM.c, select the **Configuration Wizard** tab and press **Expand All**.
- 10. Change the **RTOS Kernel Timer input clock frequency [Hz]** to **30000000** as the Xplained Ultra board runs on 300 MHz.

Configure the Target Options

- 11. Click on K or press ALT+F7
- 12. Select the **Debug** tab and choose **CMSIS-DAP Debugger**. Press **OK**.

Add the Blinky code

13. Change *main.c* as follows:

```
#define osObjectsPublic
                                         // define objects in main module
#include "osObjects.h"
                                         // RTOS object definitions
#include "samv71.h"
                                         // Device header
#include "Board LED.h"
                                         // ::Board Support:LED
extern int Init blink LED (void);
int main (void) {
 osKernelInitialize ();
                                         // initialize CMSIS-RTOS
 LED Initialize();
 Init blink LED();
                                         // start thread execution
  osKernelStart ();
  while(1);
}
```

14. Change *Thread.c* as follows:

```
// CMSIS RTOS header file
#include <cmsis os.h>
#include "Board LED.h"
                                        // ::Board Support:LED
void blink LED (void const *argument);
                                                     // thread function
                                                     // thread id
osThreadId tid blink LED;
osThreadDef (blink_LED, osPriorityNormal, 1, 0); // thread object
int Init blink LED (void) {
  tid blink LED = osThreadCreate (osThread(blink LED), NULL);
  if(!tid blink LED) return(-1);
 return(0);
}
void blink LED (void const *argument) {
 while (1) {
   LED On (0);
   osDelay(500);
   LED Off (0);
   osDelay(500);
    osThreadYield();
  }
```

Build the Project and run it on the Target

- 15. Go to File \rightarrow Save All
- I6. Go to **Project** → **Build Target** (or press **F7**)
- 17. Connect the PC using a Micro-USB cable to **DEBUG USB** port¹
- 18. Go to **Flash** \rightarrow **Download** to flash the project to the target
- 19. Go to **Debug → Start/Stop Debug Session** (or press **CTRL+F5**)
- 20. Go to **Debug** \rightarrow **Run** (or press **F5**) to run the project on the target. **LED0** will start flashing.

¹ The installation of the USB driver might show an error. This can safely be ignored.
